

# The Reclaimer Rig

## Wastewater Processing Solutions for Temporary Housing Installations

WaterFleet proudly offers The Reclaimer Rig, a self-contained unit that eliminates hazardous transport of sewage and creates a minimal haul-out environment, reduces odors and risks from on-site septic water storage, and provides reclaimed wastewater for approved beneficial reuse. Each high-capacity mobile Reclaimer Rig processes up to 3,000 gallons of domestic wastewater per day.

# The Reclaimer Rig

The same innovators who revolutionized bottled water processing are transforming the potable water and wastewater management industry through pioneering technology. WaterFleet's green solutions significantly improve workforce living conditions and productivity, provide long-range cost savings, streamline operations, and safeguard the environment. Its problem-solving focus of on-site potable water production and wastewater management has significant applications for a variety of industries, including oil field, construction and emergency management.

## System Features and Benefits

### Solutions

- Reclaims up to 3,000 GPD from process
- Eliminates haul-out or on-site storage of sewage
- Reduces or eliminates odors from septic water storage

### Self-Contained

- Custom, high-capacity 20 ft. enclosed trailer
- Single point electrical connection
- Fully automated control with remote monitoring

### Collection and Transfer

- Includes lift stations for sewage collection
- Includes all connections and single pressurized line delivery
- Secured connection points
- Continuously monitored levels

### Reclaim Water

- WaterFleet provides piping to customer-provided storage location
- Customer can re-use water for downhole activities, irrigation or dust suppression
- Discharged water meets OSSF and TRRC standards for beneficial recycling and is chlorinated and filtered

## Utility Requirements

### Electric Power

- 220V, 1PH, 60HZ, 60A
- Single point plug connection
