

The Water Rig

Mobile Water Solution for Temporary Housing Installations

WaterFleet proudly offers The Water Rig, a self-contained unit that provides verifiable clean water for drinking, cooking, washing, and showering. The mobile system helps prevent worker illness, unsafe site conditions, compliance concerns, and plastic trash buildup. Each Water Rig supplies up to 6,000 gallons of potable, drinking-quality water and 500 pounds of ice per day.

The Water Rig

The same innovators who revolutionized bottled water processing are transforming the potable water and wastewater management industry through pioneering technology. WaterFleet's green solutions significantly improve workforce living conditions and productivity, provide long-range cost savings, streamline operations, and safeguard the environment. Its problem-solving focus of on-site potable water production and wastewater management has significant applications for a variety of industries, including oil field, construction and emergency management.

System Features and Benefits

Solutions

- Processes on-site water well source or non-potable delivered water
- Provides up to 6,000 GPD potable water
- Built in drinking water fill station and safety shower
- 500 pounds of ice per day produced and dispensed from trailer
- Eliminates need to haul in potable water, bottled water or ice
- Worry-free installation, monitoring, maintenance, and reporting

Self-Contained

- Custom, high-capacity 20 ft. trailer
- Built in processing and controls
- Single electrical connection
- Single source water connection

Pressurized Delivery

- Automatic pressurized delivery to multiple points
- Monitored line integrity
- Secured connection points
- Continuous operation

Outputs

- Processes inlet water TDS up to 12,000 ppm and iron levels to 3 ppm
- Delivered water exceeds potable water standards
- Added chlorine maintains potable water levels
- Ice produced from drinking water supply

Simple Operation

- Remote, 24/7 monitoring with on-site wired or wireless connection
- Fully automated operation
- Simple start up and shut down
- Includes connections required for a multi-housing install

Water Supply

- Customer provides well water supply and site holding tank
- WaterFleet performs raw water testing to determine ability to process water
- WaterFleet supplies all pump and lines required to connect holding tank to Water Rig

Reject Water

- WaterFleet provides piping to customer-provided storage location
- Customer can re-use water for downhole activities, irrigation or dust suppression

Utility Requirements

Electric Power

- 220V, 1PH, 60HZ, 100A
- Single point plug connection
