

## Warranty

---

WaterFleet is dedicated to providing the highest quality services to our clients. We go the extra mile to produce and deliver high quality drinking water to the camp, and we back up the quality with logged data, third party testing, and field audits by TCEQ certified operators. Our system is designed to only deliver water that meets water quality standards acceptable for human consumption, we guarantee it.

We are also dedicated to a consistent delivery of this high quality water 24/7/365, and we are willing to back that up. Therefore, as long as the operator is continuously providing the Water Rig™ with suitable source water and electricity, and WaterFleet is unable to supply potable water to the population for more than 6 continuous hours in a 24 hour period, WaterFleet will not charge the Water Rig rate for that day. If WaterFleet chooses to bring a Jumper Rig™ to ensure service is provided for that period, only the normal daily rate for the Water Rig will be charged. If WaterFleet is unable to process sewage at any time, WaterFleet will bear the cost of vacuum services to remove sewage collected.
