

Emergency Services

Mobile Water and Workforce Support Solutions for Emergency Response

WaterFleet's mobile rig systems and support facilities are a services provision solution for relief efforts in natural and man-made disasters and emergencies. Capable of processing contaminated water sources into verifiable clean water in the most extreme of circumstances, the Water and Reclaimer Rigs provide comprehensive potable water and wastewater management. On-site support is expanded to include restroom and meeting space for critical operations when paired with The RAFT and/or Reliever Rigs.

Emergency Services

The same WaterFleet benefits experienced by some of the energy industry's most recognized companies operating in challenging environments translate to any circumstance requiring on-site potable water and wastewater management needs. WaterFleet's problem-solving systems are significantly applicable in emergency management planning and relief efforts. Its portable, rapidly-deployable fleet is equipped for temporary or long-term disaster recovery and property restoration sites.

The logistics required to have safe drinking water, sewer services, ice, restrooms, and rehab or meeting space readily available for response teams are time consuming and challenging. When compounded by the need for routine water delivery, wastewater management, and hauling off of plastic trash, critical time is taken away from relief efforts.

WaterFleet is positioned around the state to rapidly deploy its rig systems where on-site emergency staff are stationed. Its innovative, flexible approach can be adapted to provide essential infrastructure support when and where it is needed. WaterFleet's proprietary mobile water treatment system is also regulation compliant and can be fully integrated into operations that include mobile laundry, food service and temporary housing.

The Water and Reclaimer Rigs

- WaterFleet's core system allows emergency managers to focus on their work teams and relief efforts rather than provisions logistics. The Water Rig's production of on-site potable water and ice and the Reclaimer Rig's on-site treatment of domestic sewage is managed with swift installation, generator-powered operation, and remote 24/7 digital monitoring for quality assurance.

The Reliever Rig

- Connected to the Water Rig and Reclaimer Rig, The Reliever Rig provides climate-controlled, fully-equipped restrooms for as many as 500 response team workers per day, eliminating the need for portable toilets and related coordination. An external safety shower, eye-wash station, hand sinks, and storage area deliver added benefit.

The RAFT

- Through connection to the WaterFleet Rig system, The RAFT supplies climate-controlled meeting and shelter space for disaster response, recovery base camp, mobile kitchen, field hospital, field mortuary, worker rehab, and command post or alternate emergency operation centers, including audio, video, and cell boost capabilities. Additional features include:

- Restrooms for up to 100+ relief workers per day
- Water, ice and food vending plus refrigerated storage
- External safety shower, eye wash station, hand sinks, and boot wash
